New patient examination consists of five basic components:

- 1) Doctors complete visual exam**
- 2) Update Radiographs**
- 3) Periodontal evaluation exam to detect gum disease**
- 4) Oral cancer visual screening**
- 5) Healthy Mouth Prophylaxis**

Dental x-rays are essential in diagnosing any pathology not visible to the naked eye. A full mouth series of x-rays are required every two to three to five years. Bitewing x-rays are required one time each year to detect decay between the teeth.

If you are alternating cleanings with a dentist in another state, please let us know their name, address, and phone number. We can send or e-mail copies of your x-rays to their office.

Dentist: _____ **PH.** _____
