REGENERATE

clarix®
FLO

A simple injection of CLARIX® FLO performed in your doctor's office may help you **avoid or delay surgery**, restoring normal function and returning you to the active lifestyle you once enjoyed.

FREQUENTLY ASKED QUESTIONS about CLARIX FLO

How is the tissue donated?

Amniox Medical obtains the placental tissue used in all its products through a voluntary donation program across the US.

Donor mothers provide full consent prior to delivery of a full-term, live, newborn baby via a scheduled Cesarean section.

The amniotic membrane and umbilical cord, which are usually discarded, are then processed and preserved at Amniox Medical's state-of-the-art US-based facility.

Is the tissue safe for implantation?

Prior to donation, all mothers are carefully screened to ensure safety, based on requirements established by the Food & Drug Administration (FDA) and American Association of Tissue Banks (AATB).

Additionally, the donated tissue is thoroughly screened for infectious diseases, including HIV, Hepatitis B & C, Syphilis, West Nile, and Zika among many others.

Finally, the donated tissue is thoroughly cleaned and processed to maintain the tissue's regenerative properties, while eliminating living cells. CLARIX FLO is fully sterilized prior to shipping.

To date, after more than 200,000 procedures, there have been no reports of disease transmission or tissue rejection from amniotic tissue products produced by Amniox Medical or its family of companies.

Regenerative Injection Therapy

amniox®
RECLAIM YOUR LIFESTYLE.

WHEN CONSERVATIVE TREATMENTS FAIL

Maintaining an active lifestyle after suffering from debilitating injury or disease is never easy.

Inflammatory or degenerative conditions – including **tendinitis** and **plantar fasciitis**, among others – can severely restrict your activity, leaving you with extreme pain and disability.

When conservative treatments fail, surgery may seem to be your only remaining option.

REGENERATIVE THERAPY MAY BE AN OPTION

Over the past decade, regenerative medicine has revolutionized the treatment of many musculoskeletal conditions.

This game-changing area of medicine seeks to encourage **your own body to repair itself** by replacing or regenerating defective tissues.

Only one innovative regenerative therapy leverages the innate restorative properties of **umbilical cord**. This natural tissue-based therapy has been shown to be beneficial to the body's own healing process.

A PROVEN TREATMENT OPTION:

The Unique Regenerative Properties of Umbilical Cord

Amniotic tissue, which includes the umbilical cord and amniotic membrane surrounding the unborn baby, has been designed by nature to allow the fetus to develop in a healthy, controlled manner, protected from outside interference or trauma.

Unlike any other tissue in your body, it also has regenerative properties to promote healing without evidence of scarring or damage. These reparative abilities come from several innate biological factors that promote tissue growth and healing.

These biologic factors are most highly concentrated in the umbilical cord, making this an ideal tissue for use as a regenerative therapy for you!

amniox®
MEDICAL

Leveraging the science of regenerative medicine, Amniox Medical has become the pioneer in researching and delivering the reparative properties of the umbilical cord to conditions of the soft tissue and joints.

Our unique, industry-leading technology harnesses the innate power of the umbilical cord to deliver these regenerative properties to you through a simple injection at your doctor's office.
